

## Boom Lift License Prince Albert

Boom Lift License Prince Albert - In order to operate an aerial boom lift, operators should be licensed through training which could be obtained using both classroom sessions and practical training and by obtaining a boom lift license. Instruction should be given with respect to the type of aerial lift which will be utilized on the job. A License is needed for anyone who operates or works on an aerial boom lift.

Vehicle-mounted aerial devices include the following work vehicles: aerial ladders, extensible boom platforms, articulating boom platforms, vertical towers, and whatever combination of these types.

There are several basic safety regulations which apply to all boom lifts. Worker safety while inside the basket is a main concern. Workers should have on a body harness and lanyard connected to the boom or basket. Never tie off to an equipment, an adjacent pole or a structure. Personnel must stand on the basket floor, and never sit or climb on the edge of the basket. The manufacturer's load limitations must be followed.

Aerial lift operators should be authorized to utilize the machines. The operator must know all the aspects of the device and must have access to the manufacturers guidebook which must be kept inside the lift. Operators are responsible for ensuring that safety procedures are followed in the operation of the lift. A daily test of lift controls should be performed. Position outriggers and set brakes (if they are used) on a stable surface or on pads. When working on a slope, make use of wheel chocks.

The aerial lift vehicle should never be moved whilst a worker is within the basket of an elevated boom, unless they are making use of equipment which are specifically designed for this. Articulating boom and extensible boom platforms utilized as personnel carriers should have accessible, plainly marked, upper controls. Except in emergency circumstances, lower controls should not be used to override upper controls unless permission has been given by the person within the lift.

While working from an aerial lift, do not wear tree or pole climbers.

The insulated portion of the aerial lift should not be altered.

Do check the booms to ensure it is correctly cradled and the outriggers are in the stowed position prior to moving.

When operating a boom lift next to power lines, make sure that the lines are di-electrically tested according to local rules.
