The U.S. forklift division stationed in Cleveland has a professional team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

Doosan's lift truck history

Korea's initial home-based lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a national machinery expansion project. Early sales of this industrial equipment focused on large business communities, the armed services and on state-run corporations. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Forklift Export Expansion

Daewoo began the first home-based lift truck business in 1967, and rapidly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological improvements combined with sales success placed them in a situation of considerable growth of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to assist them in the very competitive North American materials handling industry. This project proved highly lucrative for Daewoo and their lift truck sales expanded greatly. In 1984, the company finished development of a new facility to help in manufacturing high end value-added goods for export. In 1993, the corporation had a international sales system and started exporting versions they had developed through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas marketplaces.
